## Tysabri Black Box Warning

---

- TYSABRI increases the risk of progressive multifocal leukoencephalopathy (PML), an opportunistic viral infection of the brain that usually leads to death or severe disability.
- Cases of PML have been reported in patients taking TYSABRI who were recently or concomitantly treated with immunomodulators or immunosuppressants, as well as in patients receiving TYSABRI as monotherapy.
- Because of the risk of PML, TYSABRI is available only through a special restricted distribution program called the TOUCH®Prescribing Program.
- Under the TOUCH®Prescribing Program, only prescribers, infusion centers, and pharmacies associated with infusion centers registered with the program are able to prescribe, distribute, or infuse the product.
- In addition, TYSABRI must be administered only to patients who are enrolled in and meet all the conditions of the TOUCH®Prescribing Program.
- Healthcare professionals should monitor patients on TYSABRI for any new sign or symptom that may be suggestive of PML.
- TYSABRI dosing should be withheld immediately at the first sign or symptom suggestive of PML.
- For diagnosis, an evaluation that includes a gadolinium-enhanced magnetic resonance imaging (MRI) scan of the brain and, when indicated, cerebrospinal fluid analysis for JC viral DNA are recommended.
